

Curriculum Vitae

Name	Martin Hochmair	
Date of birth	19 November 1995	
Residence	Grieskirchen, Austria	
Education	2016 – 2017	Civilian service
	2011 – 2016	Matura, HTL Grieskirchen – Computer Science

Previous projects

Full-Stack Web Developer

09/2025 – present: KION Group AG: Digital Service Assistant

Contributed to the development of an application for service technicians to manage and maintain forklift trucks. Among other things, the solution provides access to technical drawings and a guided repair procedure including spare-part mapping. A particular focus was the offline-capable Electron client, which autonomously and periodically synchronises data whenever an internet connection is available. Technologies used: Angular, PrimeNG, Electron, Spring Boot, MongoDB, H2

Full-Stack Web Developer

07/2022 – present: g&o brokernet platform

Design and re-implementation of a system landscape in an agile Scrum team of 6 developers to fully digitalise insurance processes through various web applications and a smartphone app.

Focus on frontend development with Angular (v14–19) and Ionic/Capacitor for web and smartphone. Implementation of micro-frontends with a shared TypeScript component library, reactive programming using rxjs and signal stores, and co-responsibility for the UI/UX design of responsive, mobile-first and accessible interfaces. E2E testing with Cypress.

Backend development and integration of RESTful Java microservices with Spring Boot, JPA/Hibernate, PostgreSQL, Redis and Docker Swarm, plus deployment via CI/CD using GitLab pipelines.

Technologies: Frontend: various micro-frontends with Angular 14–19, JavaScript/TypeScript, HTML5, CSS3/SCSS, Bootstrap & PrimeNG, Ionic/Capacitor, rxjs, E2E testing with Cypress, IntelliJ, NodeJS

Backend: various microservices with Java Spring Boot and PostgreSQL (Hibernate/JPA & Flyway), Redis, hosting via Docker Swarm, CI/CD with GitLab pipelines, JUnit/Mockito, Google Firebase

Details: <https://go-brokernet.at/maklerplattform/>

Frontend Web Developer

10/2019 – 10/2022: RSE Informationstechnologie

Further development and maintenance of an Angular frontend in a team of 4 developers based on Angular Material for monitoring pumping station systems; implementation of automatic alerting; evaluation of pumping station parameters over defined periods with graphical presentation; a view for configuring user-defined displays of parameters, graphs and controls; development of an interactive map showing pumps and faults; periodic generation of water quality reports; development of a tool for generating SCADA systems driven by real-time parameters.

Lead frontend responsibility for the transition from AngularJS to Angular and the introduction of a new, modular frontend architecture to enable parallel development streams and significantly improve maintainability. Also connected the frontend via REST to a C# .NET backend.

Details: <https://www.rse.at/de/mytas>

Technologies: Angular 12, Angular Material, JavaScript/TypeScript, HTML5, CSS3, Leaflet, OpenStreetMap, goJS (SCADA visualisation), TFS, REST API with C# .NET, IntelliJ

Full-Stack Web Developer

02/2019 – 10/2019: eww Group (Welsstrom)

Responsible for the technical design and end-to-end development of a digital charging-atlas platform to simplify the activation of charging sessions for electric vehicles.

Development of a frontend with VueJS and a backend with PHP and MySQL, plus E2E testing with Cypress. Delivered in close coordination with the client using an agile approach.

Technologies: VueJS, HTML5, SCSS, automated testing with Cypress, backend with PHP, SQL, IntelliJ

Full-Stack Web Developer

06/2017 – 01/2019: Lipsum-Soft GmbH

Full-stack developer in a team with 5 other full-stack developers. Further development of several web applications for insurance companies as well as a solution for legally compliant digital signatures.

Technologies: Java 8 & 16, Spring Boot Framework, Redis, Elasticsearch, Angular 6 – 12, HTML5, CSS3, JavaScript/TypeScript, nx/rxjs, MongoDB & PostgreSQL, IntelliJ

Technical skills

Core focus on full-stack web development with Angular, HTML5/CSS3, TypeScript, rxjs and nx, Bootstrap, PrimeNG, Angular Material, automated testing with Cypress, as well as Java Spring Boot with JPA/Hibernate, PostgreSQL and MongoDB.

System integration and deployment (connecting internal and external systems, go-live coordination)

Methods/Tools

Agile approach with Scrum (two- to three-week sprints, planning, retro), effort estimation with Fibonacci points, code reviews and pair programming, daily stand-ups and weekly deployments

Customer and stakeholder meetings (requirements workshops, regular alignment)

Timeline and milestone planning, go-live management (test coordination, monitoring, roll-out support)
